DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 5-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Borowiec et al. (US 5,629,584).

Borowiec discloses an arc discharge lamp with an arc chamber attached to an amalgam tip, an amalgam retainer abutted against the constricted area and amalgam contained within the tip.

Regarding claim 5, the lamp is a low pressure discharge lamp.

Regarding claim 6, the amalgam includes bismuth and indium.

Regarding claim 7, the amalgam tip has a given diameter and the retainer has a larger diameter prior to insertion.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Borowiec et al. (US 5,629,584) in view of Stinton et al. (US 5,075,160).

Art Unit: 2879

Borowiec discloses the above claim limitations but fails to clearly point out the retainer comprising ceramic felt fibers of mixed aluminum and silicon oxides with a diameter of <10 microns.

Stinton discloses using ceramic felt fibers <10 microns diameter of mixed aluminum and silicon oxides in order to remove particulate matter from high temperature gases.

Hence it would have been obvious to one having ordinary skill in the art at the time the invention was made to use the lamp of Borowiec with the ceramic felt fibers <10 microns diameter of mixed aluminum and silicon oxides in order to remove particulate matter from high temperature gases, as taught by Stinton.
